

Project Profile:
Northampton Racecourse

Good looks – delivered at the gallop

Project Name: Northampton Racecourse Pavilion
Location: Northampton
Client: Sport England – Football Foundation
Product: MCM featuring Rhepanol fk
Size: 1,000 m²
Architect: Northampton Borough Council
Installer: GL Contracts Ltd

Aesthetics were leading the field of priorities when FDT was asked to provide a new pavilion at Northampton Racecourse.

The sports pavilion sits in the very heart of a conservation area and so it was vital the roof had the appearance of an authentic lead roof – without impacting on either budget or on installation time.

The solution was a membrane-coated metal (MCM) roof featuring Rhepanol fk. The MCM was mechanically fixed to incorporate an insulated trapezoidal metal deck. The joints were sealed and waterproofed using Rhepanol technology. As a result, the project was fast-tracked to come in on budget and on time without compromising on aesthetic appeal.
